### **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance:

The instant application is directed towards an unobvious arrangement in the turbine cooling art. Specifically, Applicant claims a first cooling circuit joined to an intermediate stage of a compressor for channeling air at a first pressure through the center of a first turbine, a second cooling circuit joined to a second intermediate stage of the compressor for channeling air at a second pressure to the aft side of the first turbine, and a third cooling circuit joined to the discharge end for the compressor for channeling air at a third pressure to the forward side of the first turbine.

While it is known to bleed air from various stages of the compressor to cool turbine section in the gas turbine art as evidenced by US Patent 6,487,863 to Chen et al. and US Patent 5,134,844 to Lee et al., none of the known prior art teach or suggest the sequence of cooling circuits claimed by Applicant. Further, there is no motivation to combine various cooling schemes to produce the sequence as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
